2008 / TÜRKİYE VAKIFLAR BANKASI – Training Portal

It is about the preparation of a structure covering an e-learning management system backed with various listing and reporting which will be processing over the e-mail system and personal portal pages and which will also eliminate the correspondances aimed at overcoming the systemic inefficiencies encountered by the Bank Training Directorate during the process of change and restructuring. With the help of the Training Portal, all the processes like training requests of the employees, teachers, training subjects, training locations, accommodation information, training companies, cost, attendance and evaluation forms can be managed easily. Automatic applications can be made to the trainings of Banks Association of Turkey. It is a system where directors can request trainings for their employees, which also incorporates features like library and intracompany announcements. By means of the exam system, questions' and exams' repository is dynamically created for the employees to have an exam platform for trying, evaluating and learning. The Training Portal including educational planning, classroom participants' utilizations, form editing and authorization system can run SCORM compatible training packs.

2008 / BOTAŞ INTERNATIONAL LIMITED – Training Portal and Competency Management

The portal created for Planning and Organizing Trainings for those working at BIL, also includes company specific Competency Management system. With the help of the Training Portal, all the processes like training requests of the employees, teachers, training subjects, training locations, accommodation information, training companies, cost, attendance and evaluation forms can be managed easily. By Competency Management system, in accordance with their profile descriptions, it is monitored how competent Bil employees are in what they are doing. A system was created where directors can request trainings for their employees which also incorporates features like library and intracompany announcements. By creating the Annual Training Calendar, Training Planning and the related budgetary arrangements can be made. By means of the exam system, questions' and exams' repository is dynamically created for the employees to have an exam platform for trying, evaluating and learning. It can run SCORM compatible training packs. The shift and permission statuses of the employees work in integration with the HR application of the company and the necessary notification mechanisms are available in Training Planning.

2007 / İSDEMİR – Training Portal

A Training Portal has been created for the Training Organizations of 6300 employees of Isdemir. It is a training portal application where it is possible to manage all processes like training enquiries, teacher, training location, training company, cost, attendance and evaluation forms. Performance and cost analysis, budgetary work for future periods can be realized.
