#### **2007 - 2008 / AZERSUN HOLDİNG - Network optimization work**

LAN and WAN infrastructures of ASB Bank and Azersun Gıda, two companies within Azersun Holding operating in Azerbaijan, were completely equipped with optical fibre systems. Also, VLAN settings on this structure, required security and forwarding work was completed. The internet security was provided with Cisco ASA firewall and the VPN infrastructure through which, the branches will be able to make secure connections to headoffices, was prepared.

#### **2007 - 2008 / KİBAR HOLDİNG - VLAN and 802.1x Identity Based Network Access Project**

Kibar Holding got consultancy service from Bilge Adam in order to have a secure and high performance network infrastructure which can work with backups. The LAN structure which has been in common use of Kibar Holding group companies located in Tuzla, Dilovası and Kartal campuses, has just been separated into managerial and functional aspects. After realizing the VLAN configuration, the required upgrades and settings were arranged for the use of security, performance and network management tools. Also, in accordance with the requests of the customer working with Microsoft products, arrangements including server services like MS Radius service, Certificate server and IP address distribution etc were realized. As for the security arrangement, a special conversion to 802.1x structure was made hence procuring network access by authentication. The second phase of the project is still in progress upon the completion of which functions like the security of the wireless networks and guest reception portal will be active.

#### **2007 / İSKENDERUN ENERGY - VLAN Project**

The currently active network infrastructure has been divided with respect to security, performance and managerial functions to be converted to VLAN structure. By the measurements taken, it was proven to the customer that a relatively higher performance and work with backups was obtained after the conversion. Because, the cable infrastructure prepared with backups was put into action with the necessary settings, after completing the projects, real infrastructure with backup started to be used. By means of easy management tools, fast and accurate network management was made possible. One person worked for this project and the work was completed in four days' time.

#### **2007 – 2008 / HP Procurve Outsource**

Since 2007, a Bilge Adam Consultant has been outsourced as technical consultant at HP Procurve.
